## DETAILED ACTION

### *Remark*

1. Claims 15, and 22-26 have been canceled.

### *Allowable Subject Matter*

2. Claims 1-14, and 16-21 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:  

Regarding claims 1, 6, 13, 14, 16, and 17, Alford discloses in a controller, a method for reducing latency in a group communication network, the method comprising: receiving an indication from a communication device that a user wishes to initiate a group call; receiving media from the user before processing a request for group call initiation; and buffering the received media for later transmission to another communication device” (Figs. 15-17, the user can activate or initiate a group call by using an actuator 1506 or 1608, and media such as data messages from the user for interconnect call, radio-to-radio call as in col. 13/line 60 to col. 14/line 56, and data is stored, retrieved and replaced within an EEPROM regarding as a buffer for temporary storing received data, see col. 12/lines 14-61 and col. 14/lines 4-56 as the system continues to monitor and later transmit the data messages or media to another communication device if the checking for the appropriate system is identified). However, Alford does not further suggest at least the use of embedded content including a network’s media and real-time media signaling destination address in response to a request to join the network as called for in claims 1, 6, 13, 14, 16, and 17.
